THE LOW DOWN 2013

COLOURS, STYLES AND
SIZES TO SUIT ANY
BRAND OR TEAM COLOURS

If now is the time to re-invent the image for your business, company, organisation or sport and you are considering Aussie Pacific then you're certainly on the right track. That's most likely why you have our coolest Catalogue to date in your hands?

Right now it's even more critical than ever to make the difference with an addition or upgrade to a stylish uniform. This will benefit any sports or business team. If asked to define our area, it would be team wear supply because Teams have built our Australian culture.

We all have our own 'brands' which could be sports, business, club, organisation or team. A uniform cultivates recognition and is a common feature shared by many of the most successful sports teams & businesses in the world.

We offer you this 2013 range in colours, styles and sizes to suit any brand or team colours whether the look is bold team unity, sleek and elegant or more casual.

Aussie Pacific's performance yarn is **DRIVEWEAR™** using high technology that absorbs, wicks and dries faster than normal fabrics by moving moisture away

from your skin and isolating it on the outer surface. The moisture will evaporate and also carry an anti-bacterial treatment on the yarn to keep it fresh and appealing. There are indeed psychological benefits to wearing the new performance fabrics by keeping a lower skin temperature, reduced perceived physical exertion during exercise, and the increased ability to keep your focus.

We've used 4 types of **DRIVEWEAR™** fabrics for our 2013 range: Mini-Waffle, Cotton Backed Pique, Cotton Blend Pique & Birdseye.

OUR MOST COOLEST CATALOGUE TO DATE

Our performance fabrics go through the laundry very well and lasts longer due to the quality construction. They can be used all throughout the year and are perfect for travelling since they are wrinkle free and neutralise odours.

And of course, the difference with Aussie Pacific is that you can put your logo on any of these quality pieces of apparel and know that you are doing justice to your brand.

Always consider that your brand represents you so make sure the clothing you choose meets and exceeds your brand's image.

RE-INVENT YOUR BUSINESS,
COMPANY, ORGANISATION OR
SPORT. MAKE A DIFFERENCE,
TO STAND OUT BY UPGRADING
TO A STYLISH UNIFORM THAT
WILL ENHANCE ANY SPORTS
OR BUSINESS TEAM.

Hi viz

HOW TO MEASURE

WE'VE GOT YOU COVERED.

Have you ever considered why your size changes with the brands you wear?

Have you ever considered how a shirt is made?

STEP 1

CHOOSE YOUR FAVOURITE FITTING SHIRT

Get your favourite fitting Polo Shirt, Tee Shirt or Singlet and grab a tape measure or ruler.

TIP: don't get a button up shirt because they don't stretch as much as a knit does.

STEP TWO

LAY IT DOWN ON A FLAT SURFACE

with the arms extended and smooth it flat.

TIP: make sure no-one is wearing it.

STEP THREE

MEASURE DOWN 2.5CM

from where the arm is sewn onto the body, give yourself a 'mark'.

TIP: don't use a pen or marker, just make a light indentation in the fabric with your fingernail.

STEP FOUR

HALF CHEST MEASUREMENT

Use this 'mark' you've just made and then measure across the front of the shirt from seam to seam.

TIP: only measure the front, that's why it's called a half chest measurement.

STEP FIVE

SIZING TABLES IN THIS CATALOGUE

or On-Line www.aussiepacific.com.au to match your half chest measurement to the Sizing Table.

TIP: do the measure up more than once in case you mis-read the numbers.

STEP SIX

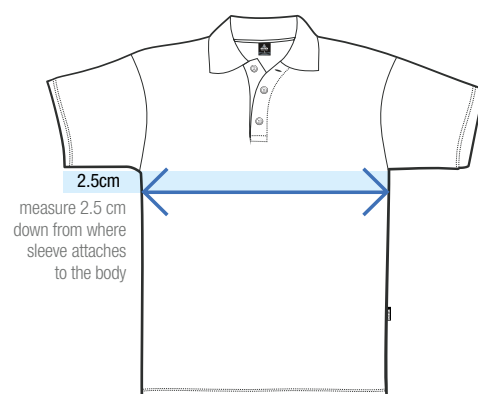

COMPARE AND THINK

Let's say, after measuring, you find your half chest measurement is 58cm then go to the shirt style you are going to choose and associate that cm measurement to the size of the shirt, so for example a Eureka Polo Size L has a 58cm half chest.

TIP: Measure a couple of times

TIP: If you come in at 59cm, then consider going to an XL at 60.5cm

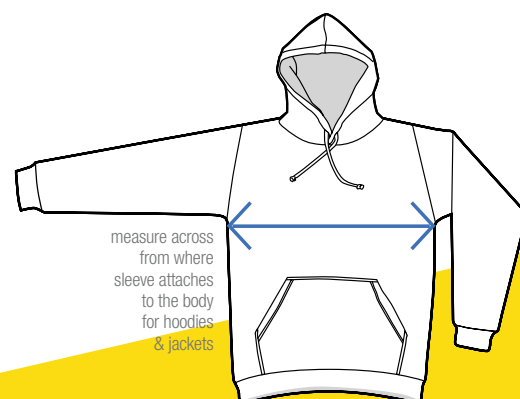

TIP: it's not mass produced by large automatic machinery. Our garments are carefully crafted by hand. That's why all Aussie Pacific garments have a sizing tolerance of between +/- 1-2cm.

HALF CHEST MEASUREMENT

PLEASE NOTE:

ALL GARMENTS ARE MADE BY HAND AND MAY HAVE VARIATIONS +/- 1-2cm (guide only)

HALF CHEST MEASUREMENT

FABRICS

2013 RANGE

OUR LATEST FABRICS
WILL KEEP YOU AT
PEAK PERFORMANCE

We figure the more you know about the highlights and features of the fabrics we offer, the better equipped and informed you'll be to make the decision to choose the best type of Aussie Pacific team wear so let us do the research for you?

BIRDSEYE

New for 2013 is an elegant yet durable 'Birdseye' knit that gives another dimension to the Aussie Pacific range. Birdseye is an extremely lightweight, soft smooth silky feeling Polo that weighs only 155gm**

This is a fabric knitted with a pattern of small diamonds, each having a dot in the centre or a surface texture of small uniform spots that suggest bird's eyes

This fabric has been introduced into the 2013 range for the Flinders (14 colours for Men and 15 for Ladies) and the Endeavour (19 colours) for both Men & Ladies.

Because both of these styles are a 100% Polyester **DRiWEAR™** fabric, they are perfect for Dye Sub image on a white made up garment, embroidery or screen printing or both.

** Fabric gsm or gm is the 'grams per square metre' weight of a knit (polos, tees, singlets, hoodies) or woven (shirts or jackets) fabric.

COTTON BACKED PIQUÉ

This 180 gm fabric was introduced due to popular demand to the Aussie Pacific range in 2012 with the Paterson range which has been specifically knitted to have a comfortable layer of cotton (20%) against your skin while the outer fabric is polyester.

In 2013, 5 additional colours have been added to the existing Paterson colours and there are two new Polo introductions with the Keira (5 colours in a Raglan Sleeve) and Panorama Polos (12 colours).

There is also a Winter co-ordinate Hoodie for both the Paterson & Panorama Polos with both flat front and zip through. Also in a piqué knit and while not cotton backed is the Reef Polo, a cotton blend Piqué knit fabric that amalgamates both the **DRiWEAR™** and cotton yarns into a light yet breathable stylish polo.

Piqué Knit is pronounced "P-K" and is the fabric that is most associated with the famous original Lacoste Alligator Polo shirt since 1933 and it is also sometimes called a mesh piqué and is characterised by a textured fabric face with lots of tiny holes with a fabric back that is smooth.

Piqué construction is designed to pull moisture from the skin and wick it into the air by keeping the fabric and the wearer relatively dry and cool. Before the days of high tech and high performance Polyester yarns, Piqué was the original perfor-

mance fabric and in our fabric it is combined with a uniquely created 5 side yarn to give both up to date and traditional moisture removal. Our Reef Polo is a blend of **DRiWEAR™** & Cotton also in a piqué knit.

MINI-WAFFLE

Mini-Waffle is sometimes known as a honeycomb fabric and is knitted in a way which makes it very absorbent.

The mini-waffle weave also allows air to flow into and through the garment so that it dries more quickly because the surface of the fabric is textured rather like an edible waffle, hence the name.

This texture gives more surface area for absorption than a normal flat surface and because it is knitted is more durable, it is not a mechanical or chemical process that can be washed off after thorough or heavy use.

Weighing in at 160gm, our Mini-Waffle has formed the backbone of the Aussie Pacific range and is kept in large quantities of both dyed and undyed fabric in China to facilitate speedy stock on floor replenishment or custom made cut & sew or dye sublimated garments.

To date, one of the most popular styles has been the Eureka Story with these Polos available in a massive 25 colours, the Tees in 23 colours and Singlets also 25 colours. These garments can be combined with the luxurious feeling Pongee fabric Tracksuits (18 colours).

Other Mini-Waffle Polos include the 2012 introduced Botany Story which is joined in 2013 by a feminine style Ladies Polo in 9 colours and a specific lady fit Singlet in 3 colours. The Botany also has Tee, Singlet and Hoodie co-ordinates.

Tried and true best selling styles in the now famous Mini-Waffle **DRiWEAR™** include The Murray Polo (16 colours-Mens, Ladies & kids), The Premier Polo & Singlet story (17 Mens & 18 Ladies colours), the understated but elegant Yarra Polo for Men & Women (11 Mens and 12 Ladies colours) and the Sport Shorts in 8 colours.

FLEECE

2 different fabric compositions are used for our Fleece in a cotton rich knitted fabric featuring 80% Cotton (Kozi and Hotham styles for men, ladies & kids) and also a 35% Cotton (Botany, Cronulla, Paterson, Mawson, Panorama and Huxley styles for adults and juniors) both blended with Polyester. The fleece fabrics we use have a smooth outer surface making it seem flat and on the inner is the texture and this is why it is often referred to as a brushed finish, it's the most common finish.

Some features of fleece are that it provides warmth without undue weight, is soft to the touch, does not normally shrink, ravel or run and is easy to work with by printing or embroidery

especially where the cotton content is high.

SOFT SHELL

Soft Shell technology was created by big global brand outdoor and sportswear manufacturers because it allowed them to develop and offer so-called "technical" or "functional" clothing which was optimised for the particular demands of the purpose for which it was designed by having something that was light, durable, wind and rain resistant.

Synthetic materials such as polyester based fabrics are good choices as they do not absorb moisture. This fabric features usually at least three layers which are identified as : 1/ an Inner layer -providing comfort by keeping the skin dry, we use a micro-fleece: 2/ a Mid layer - to provide warmth and 3/ a Shell layer - to protect from wind and water with this outer layer working as the protection cover over the other two layers. These layers are bonded together.

We offer the Stirling Jacket as part of our range to offer a multi-purpose jacket that is easily at home in any environment where looking good yet staying warm & dry is a pre-requisite. Coming in both a Mens and stylish fitted Ladies jacket, we feel the technology in this jacket matches our **DRiWEAR™** technology.

SCREEN PRINTING ON POLYESTER PERFORMANCE FABRIC

Sometimes you may want to print a message or sponsor, club name or team on performance fabric apparel.

Dye migration is a problem that can affect many screen printed garments even a day or longer after printing if the incorrect inks and processes are used.

Whilst this problem is not common to the Aussie Pacific fabrics, it is always best to be cautious on any polyester fabrics.. Aussie Pacific suggests that to avoid possible dye migration and client disruption to use:

- Common sense, chances are if there are deep colours involved then there is a fair chance of migration regardless of the type of fabric.
- Put down a Wiflex Carbon Grey base under the entire image to prevent dye migration (when the ink is cured through the tunnel dryer at 152 degrees) and for best results use 43T White Mesh screen.
- Put down a White that can then be printed directly over the entire grey image using the same film on a new screen using 43T Yellow and then
- any addition colours can put down as a normal printing procedure.
- Please note, Aussie Pacific will not entertain any screen printing claims if this procedure is not used. This includes printing on polos, tees, singlets, hoodies or jackets.

DYE SUB NEW FOR 2013

DYE SUBLIMATION

Dye Sublimation is a relatively new technical process for printing designed themes using colour and imagination into fabric (not on to it). Chances are you've already got or seen dye sublimated garments in everyday use and of course, live or on TV predominantly in sports, events, promotions and some fashion.

**IT'S COOL...
IT'S UNIQUE...
YOU CAN HAVE
A HAND IN
DESIGNING IT!**

**But what if you are not creative?
Don't stress!**

You can go and discuss your requirements with decoration professionals who will use their expertise to make sure you get your unique piece or you can go on-line and design your own Dye Sublimated apparel at www.aussiepacific.com.au, then take the design to your professional and we'll custom make you a garment with a minimum of only 20 pieces, how good is that?

With Dye Sublimation (referred to as Dye Sub) the graphics are computer generated and transferred by printing to special paper using special inks which are then transferred through heat and pressure into the fabric to give you a unique piece of

clothing with the image or pattern embedded forever.

The image can be all over from seam to seam, won't fade, crack or fall off.

These garments are made in our China factory using the latest technology dye sub printers and heat presses.

Dye Sub can only be done successfully on 100% Polyester fabrics which especially suit the Aussie Pacific fabrics. This process ensures the graphics in the fabric are permanent never losing any detail or vibrancy yet the moisture removal and anti-bacterial properties of the yarn remains unchanged.

Dye Sublimated sports uniforms and apparel are popular as you can uniquely have any logo designs, patterns, numbers, names or sponsors printed onto your garments permanently using a fantastic range of colours & artistic techniques. Different types of our fabrics can be used and we can use sublimation printing to create virtually any sports uniform, promotional, event, corporate or retail garment.

WITH DYE SUBLIMATION

NEW DECORATION OPTIONS

IT MAKES SENSE TO PROJECT
THE WAY YOUR BRAND IS
PERCEIVED BY USING QUALITY
DECORATION.

Aussie Pacific garment designers have taken into account the many different methods of decorating or monogramming apparel. Here we look at the 3 main methods of decoration yet there are others such as Digitally Printed transfers and Screen Printed transfers.

Because your Brand should be synonymous with a quality garment, then it makes sense to portray the way your Brand is perceived.

Today, any decoration goes on anything, a far change from the not too distant days where a small chest print or embroidery was the norm. Splash prints, tone on tone, print/emb. combos, badges, over seam printing and foiling in abstract patterns and fonts making the opposites attract.

SCREEN-PRINTING

To understand the time and care that is taken into each silk screen printed job, we thought it would be helpful to indicate what happens each time a job is printed.

The first step is artwork.

Once the artwork is finalised, it gets sent for processing. From there, and from your printing instructions your printer will come up with a composite proof for you so you can see what your design will look like on the t-shirts (or polos sweatshirts or other garments). This will confirm the specific print locations you have instructed to print.

After the art has been approved, then film is output to make the screens.

All of the art is then pre-registered and checked for detail and quality.

The first step in the screen department is to coat the screens with a photosensitive emulsion. Next, the screen dries,

and it is placed on the vacuum light table and exposed with a 3000 watt metal halide light.

After being exposed the screens are then washed out with a pressure washer at around 1300 psi.

Once the image is washed out, it is double checked with the films for accuracy.

Each colour in a design needs a screen and each screen must be blocked, taped, setup, and squeegeed.

Just imagine if we had to do this each time a t-shirt was ordered. You can see why screen printing was designed to print quality in bulk. For smaller runs, normally a 4-6 carousel is used. For larger runs with more colours, an au-

tomatic machine with 10-18 heads. By "flashing" or drying the ink between each colour layer, a bright, professional quality print, with years of wear and tear is achievable.

MACHINE EMBROIDERY

A term that describes a specially designed, computerised, embroidery or sewing-embroidery machine to automatically create a design from a pre-made pattern that is input into the machine.

In 1980, the first computer graphics embroidery design system was introduced, running on a mini-computer. Technology was enhanced in 1982 with the introduction of the first multi-user system that allowed more than one person to be working on a different part of the embroidery process, vastly streamlining production times.

Computerised machine embroidery has rapidly grown in popularity since the late 1990s.

Design Files or 'Masters' are typically downloaded to a computer and then transferred to an embroidery machine which can then be used to stitch out the embroidery designs.

SUBLIMATION

The basic dye sublimation process uses special heat-sensitive dyes to print graphics and text onto special

gas reverts to a solid state. It has now become a part of the polymer.

This is why dye sublimation can't be done on natural materials, such as 100% cotton.

Natural fibres and non-coated materials which have no "pores" to open.

A dye impregnates colour into (not on to) a material and this colour change is permanent. Sublimation refers to changes from the solid, to the gaseous state without becoming liquid.

A polymer consists of large molecules made up of a linked series of repeated simple molecules.

Dye sublimation refers to solid dye particles that are changed into gas using heat and pressure, which then bond with any polymers present and change back into a solid.

This means the composition of the polymer has changed, no fading, cracking, peeling because the colour/s is now part of the fabric.

The fluid stored in the inkjet cartridge is the carrier of the dye. The carrier stays on the paper and only the dye migrates from the paper to the substrate.

The dye has little or no colour until heated, so what you see on the paper usually looks nothing like

the final transferred image.

Dark materials cannot be used with the sublimation process on made up garments.

Remember; This is not ink. This is a dye.

Garments decorated with a dye sublimation transfer cannot be removed like images on shirts decorated with screen printing. Again, this is not ink that sits on top of the fabric; it is a dye that penetrates the fibre of the fabric.

The dye particles are designed to bond with polyester, and ignore everything else.

It is like trying to mix oil and water with most natural materials.

SUN SMART FOR 2013

SUN PROTECTIVE CLOTHING IS CLOTHING DESIGNED FOR SUN PROTECTION AND IS PRODUCED FROM A FABRIC RATED FOR ITS LEVEL OF ULTRAVIOLET (UV) PROTECTION.

At Aussie Pacific, we take our responsibility to the nation with UPF rated and compliant fabric cover. When the UV Index reaches 3 and above, you should use a combination of these Five steps to protect against sun damage:

SLIP ON some sun-protective clothing that covers as much skin as possible.

SLOP ON SPF30+ sunscreen – make sure it is broad spectrum and water resistant. Apply 20 minutes before you go outdoors and reapply every two hours.

SLAPON A HAT another great way to protect your face, head, neck and ears.

SLIDE ON some sunglasses – make sure they meet Australian Standards.

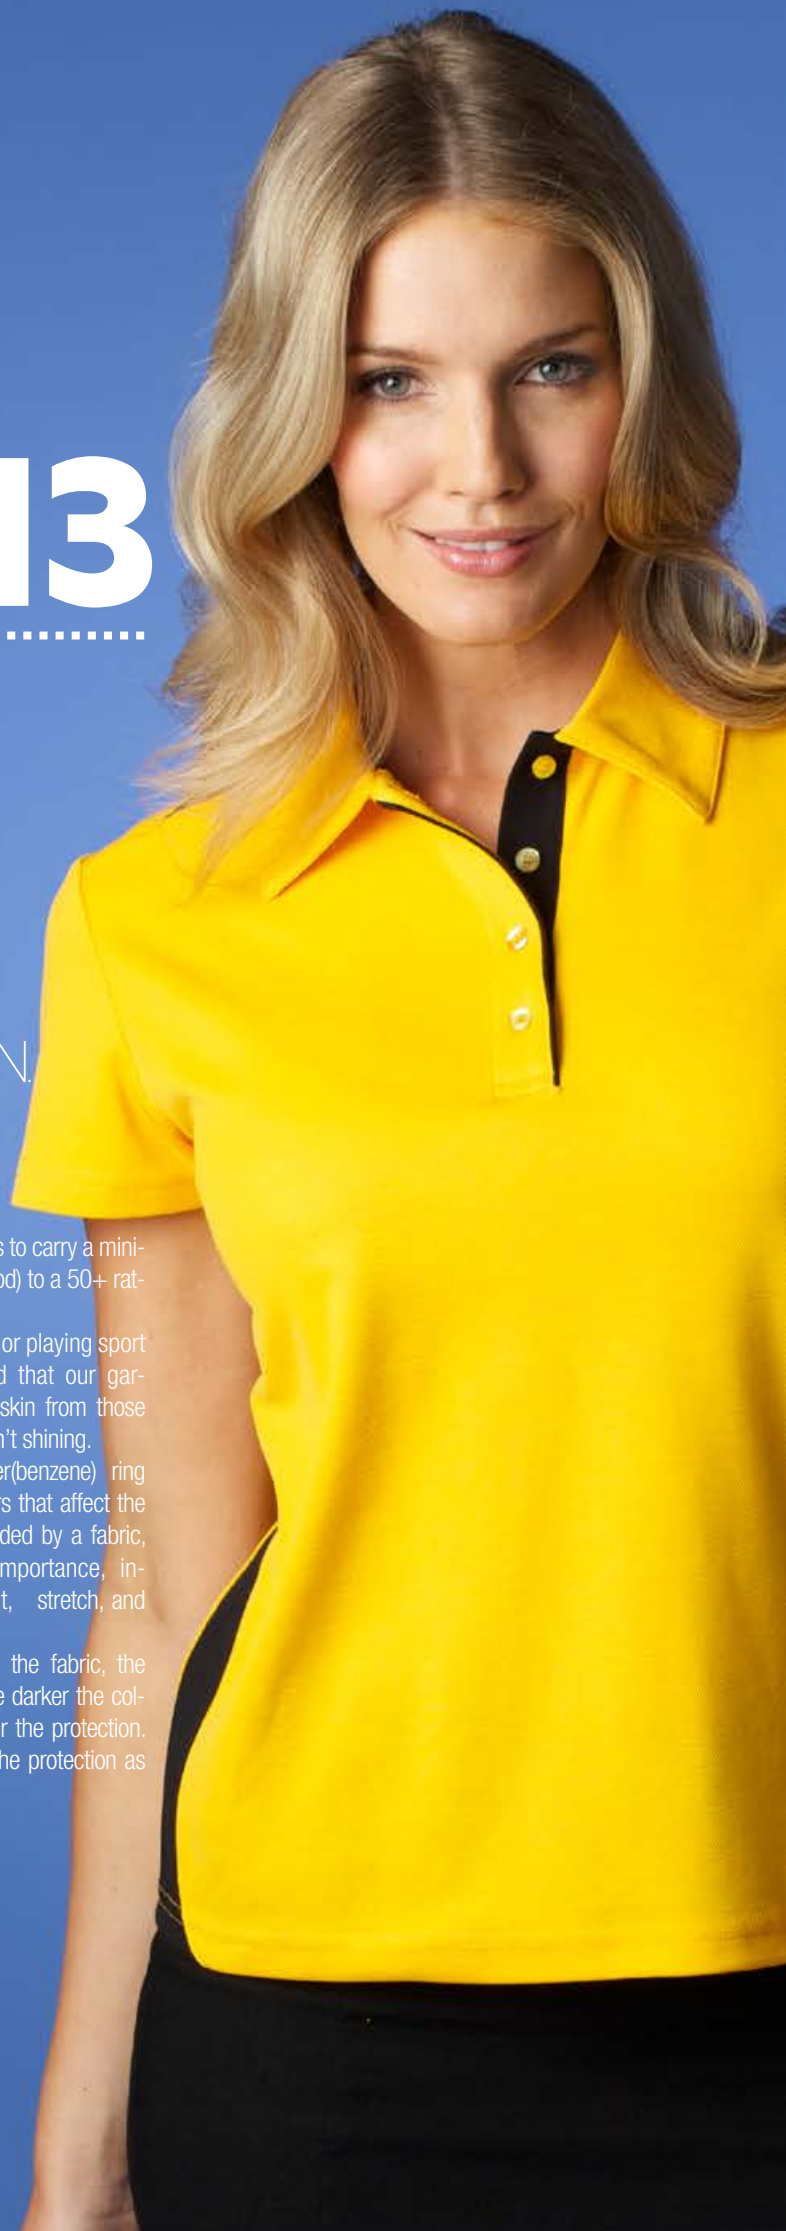

SEEK SHADE. As you will see from the table below, the bulk of our fabrics colours are in the 'Excellent Protection' category as tested to comply with AS/NZS 4399:1996

You can rely on our garments to carry a minimum of a rating 30 (very good) to a 50+ rating of excellent protection.

If you are outdoors working or playing sport then you can rest assured that our garments are protecting your skin from those harsh rays even if the sun isn't shining.

Polyester contains an ester(benzene) ring that absorbs UV light. Factors that affect the level of sun protection provided by a fabric, in approximate order of importance, include weave, colour, weight, stretch, and wetness.

The more open/less dense the fabric, the worse the protection and the darker the colour, the more dye, the better the protection. Getting fabric wet reduces the protection as much as half.

DYE SUB AUSTRALIA FOR 2013

WHAT COULD BE MORE AUSSIE THAN DECKING YOUR TEAM OUT IN ONE OF OUR AUSSIE THEMED GARMENTS.

You may be representing Australia or just taking your crew to a Test Match. With our series of Aussie (and close neighbour) polos, tees and singlets,

you can advertise your business on one of our great Dye Sub shirts. It's easy! Just go to our site and design your very own garment.

SPECIAL THANKS

Aussie Pacific would like to thank everybody who made this catalogue possible.

Models: Daniel, Garry, Keike, Lani, Mackenzie, Maddie, Oscar and Renee (Boss Talent - www.bosstalent.com.au)

Photography: Henryk - henryk@henrykphoto.com

OFF SHORE 2013

MANUFACTURING

50 PIECES

MINIMUM INDENT

6 EASY STEPS to getting a Customised Garment made Off-Shore...

Indenting is a system whereby garments are forward ordered and can be particularly beneficial where you require a Custom Made garment that represents something unique for your Brand, Team Club or Business.

You will need to get in touch with the person who gave you this Catalogue, they will be experienced in manufacturing in this off-shore area.

Aussie Pacific realise that you may want something that is different to an 'off the shelf' garment, you may want to reverse the colour combinations, add a colour to a panel or piping or have the item arrive already embroidered/printed (over 250 pieces) and packaged.

Why choose Aussie Pacific over others?

Aussie Pacific garments are made in a state of the art factory in Shanghai-China, that also makes for many of the global labels that you may already have in your wardrobe.

We'd love to name the brands but can't for obvious reasons other than to say you are sure to have at least one leisure or sports garment in

your wardrobe already?

These global labels have stringent Quality Control procedures in place which is transferred to the Aussie Pacific brand and of course to your Custom Made garment.

If your brand is as important to you as it is to us, why devalue your brand by using garments that are not made to exacting standards?

Quality garments will enhance your brand, just like a sub-standard garment will devalue your brand...can you afford to take the risk?

If not, then Aussie Pacific is a certainty for your garment.

Aussie Pacific recognise that you may not need thousands of shirts, that's why we offer a minimum of only 50 pieces made up of either mens, ladies or kids sizes as long as they are all the same colour and gender with a maximum of 8 different sizes.

Your only restriction, apart from your imagination, is that you have to choose from any of the **DRIVEAR™** mini-waffle colours shown in this Catalogue. If you want a custom colour or fabric, you will need a minimum of 1,000 pieces.

STEP 1

CHAT WITH THE PEOPLE who gave you this catalogue...

STEP 2

IDENTIFY which garment you will take and make uniquely yours for 50 pieces...

STEP 3

OR PROVIDE A SAMPLE or a picture of your desired shirt if you want 1,000 pieces fully customised...

STEP 4

WORK OUT what decoration you want and where you want it on the shirt...

STEP 5

WORK WITH your Aussie Pacific distributor to ensure you get what you want, be specific...

STEP 6

WAIT for your totally customised shirt to arrive, typically 8-10 weeks by Sea, quicker by air...

A man with short blonde hair and blue eyes is wearing a light grey polo shirt with white piping along the collar, placket, and side seams. He is standing with his hands on his hips against a solid blue background. On the right side of the image, there are two overlapping triangular shapes, one light blue and one yellow, pointing towards the center.

AUSSIE PACIFIC REALISE
THAT YOU MAY WANT
SOMETHING THAT IS
DIFFERENT TO AN 'OFF
THE SHELF' GARMENT.

2013 GLOBAL POLICY

AUSSIE PACIFIC TAKES AND CONSIDERS THE ISSUE OF SOCIAL RESPONSIBILITY VERY SERIOUSLY

Corporate Social Responsibility (CSR) is a form of corporate self regulation integrated into a business model. CSR is also known as corporate conscience, social performance or sustainable responsible business.

Aussie Pacific offers innovative products and services while conserving, protecting and enhancing resources. To do this, Aussie Pacific's CSR Policy functions as a built in self-regulating mechanism to monitor and ensure active compliance within the spirit of the law and ethical standards.

The goal of the Aussie Pacific CSR is to embrace and enhance responsibility for the company's

actions and to encourage a positive impact through our activities on the environment, our consumers, our employee communities, our stakeholders and our valued clients.

CSR is a non-binding principle that has received status in relation to both private and corporate sectors particularly in relation to workers conditions and the use of under age or child labour.

Our objective is to provide a set of requirements that when effectively implemented provides full confidence that we consistently provide goods and services that meet your ethical needs and quality expectations and comply with all necessary regulations both in China and Australia.

Our Shanghai factory in China falls under the ISO (ISO:9001) umbrella which is an international standard that gives requirement for an organisation's quality management system.

Aussie Pacific does this in a well managed and well run factory that also makes some of the large well known labels you probably already own. There is no forced, under age or child labour used in the manufacture of these retail quality garments. Workers rights and entitlements are also fore front as you would expect because Aussie Pacific is an Australian owned and operated company with ownership of the factory.

PMS COLOUR GUIDE

AUSSIE PACIFIC'S COLOUR GUIDE CAN HELP YOU WITH YOUR CLUB COLOURS NEEDS

We dye our fabrics to match the international colour pallet referred to as PMS. The Pantone® Matching System (PMS) is a standardised colour matching system, utilising the Pantone® numbering system for identifying colours in both textile dyes and inks.

By standardising these colours, different manufacturers in different locations or countries can all reference a Pantone® numbered colour, making sure colours match.

The most commonly referenced colours are in the Pantone® solids palette.

The Pantone® Solid palette consists of 1,114 colours, identified by three or four digit numbers, followed by a C, U, Or M suffix.

Originally designed for the graphics industry, the Pantone® solids palette is now used by a wide range of industries, and is the most commonly used palette.

For example, Pantone 199 Red can be identified as Pantone 199C (C= Coated Paper), Pantone 199U (U= Uncoated Paper) or Pantone 199M (M=Matte Paper).

So, when you say Red you could mean any

number of shades.

Every good Screen Print Company uses an ink mixing system that corresponds with the Pantone® Matching System (PMS).

Despite the exact nature of Pantone® colours, what you see is not always what you get when screen printing on textiles and PMS 'Fan' Books come in coated and uncoated versions.

Textiles do not come in coated and uncoated versions as paper does so C or coated colours are the best match for screen printing. Standard plastisol screen print ink has little shine by nature and more closely resembles the look of the coated PMS Colours.

Screen printing on dark garments requires an underbase so the true colour of the ink can be seen vibrantly because without an underbase the ink colours are absorbed by the garment.

An underbase is a layer of white ink before the design colours are printed and some lighter garments can be printed with no underbase depending on the colour of the garment and the ink colour.
